

2000. *Lepium leucogermum* W. n. sp.  
2000. a. - *leucospermum* n. sp.  
1895 pl. 44. - *erythrorhizon* (Lamour in olim.)  
2003. 2004. Forms of one species (lac. albicans).  
2006 } I believe both to be *leucospermum*: have  
2007 } you seen it?  
2008. *Savia lanceolata* again.  
2009. *Euphorbia lanceolata*.  
2010. *S. cyanogala*: not sent.

As to the books, I shall take care  
of them, and as Mr. Mutchmont is appa-  
rently not inclined to give subscriptions  
in letters, I may call upon him to  
lay doubtful specimens before his eyes.  
My experience with him is however (with  
difficulty to speak) not very encouraging,  
and the execration in his writings against  
Lindsay, who treated him when in England  
with the utmost kindness, is much to  
be blamed.

I try to take care of the cotton  
notes, one for Mr. Wright, the other for  
a gentleman who promised to send *Wulfschian*  
plants, which he had collected in a Ger-  
man's capacity: Do you know any  
thing of him and the value of his col-  
lections?

As ever, affectionately yours  
H. Frischbark.

Göttingen, 20 Feb. 1865.

My dear Mr. Gray,

The new *Laba* plants are safe in my  
hands: I had been very anxious whether  
they had not been injured, the stream  
through by which they came having had  
a passage of unparalled stormy weather,  
but I am glad to say, that they are  
as good as new. As you learn to myself  
to fix the price, I shall make the  
same calculation as with respect to the  
last collection, but am doubtful whether  
with respect to the money-market it  
is better for Mr. Wright to pay American  
dollars or Prussian Thalers, and I expect  
only your answer to pay Mr. Hooding  
at Hamburg.

I hope to give you a welcome  
news in telling you, that Dr. Hooker  
has had the great liberality of presenting  
me with the whole stock of duplicates  
of the *Wulfschian* Flora, so that I  
can now offer you the first number  
of the collections to be formed for distribution.  
Just as I would wish the

specimens myself, I am rather afraid to begin with it: there are about twenty large bundles. As soon as I have some leisure to do it, I may send them and ask whether it is convenient to address the parcel directly to you by a specimen steamer. If you have plants to list, take, for instance of Wright's collection or the new Rocky Mountain plants, remind me, but there is no hurry about it.

I had lately the pleasure of seeing here one of your colleagues, Mr. Eliot, but he was here only a single day.

The written catalogue of Wright's plants is highly welcome, and chiefly the corrections to some of my hasty determinations. I have now here again the second volume of Richard's Flora from the Berlin library, and shall do my utmost to identify his species, when writing the list of the new-known Cuban plants. Do you wish to have by and by the definitive name of such numbers as are still blank on the determination of which I have to make a remark? Sometimes the

discrepancy is due to misplacing of numbers, as I have formerly found by comparing Lindley's numbers of Orchiids with my own. In looking now over the catalogue, I find for instance no. 2284 = *Ampelis maritima*, while my number 292 (said to be the same) is a new *Thoninia*, called *Th. puberulata*.

I have now begun with Euphorbiaceae, and give you as a specimen my *Schinus molle*.

587 to 1923: two forms of *Scia mollis*

1924: *Lasia laurifolia* var.

1929: *Deypetes glomerata* fr.

584: *Cicca virus*.

1931: — *ambigua* (aberrant).

1932 not sent.

1933. *Cicca cubana* again.

1934. *Scia verticillata* var. calc.  
*Spicata* (*Cicca viridiflora*)

1941. *Phrynathus fuscosus* Poepp. (var. *th. jamaic.*)

1944. — *williamoides* (wrongly copied)

1946. — *palidus* var. (subvar. *palidus*)

1948. — *concolor* var. (part. *concolor*)

1949. — *pusillus* again.

1957. *Croton domingensis* V. ap. Rich. (non C. *domingensis*)

1958 & 1959. — *diversus* var.

1966. — *gunguis* var. sp.

1975. *Cannonia castanifolia*.

1983. *Atalapha glaberrima* Rich.

1984. — *pygmaea* Rich.

1994. *Leucocroton Wrightii*.

1999. *Flueggea* (Gibber) *atridothamnus* n. sp. remarkable for its

[Combining the habit of *Scia* with the structure of *Gibber*]

1990 & 1991 Forms of *O. Lindenii*, which occurs with 1-3 names.
